25X1

Dear 

25X1

Enclosed please find tables describing the fuel we expect to find available for running our kerosene engine. The data presented in Table I shows the variation in product quality (particularly distillation characteristics) of the known grades of useable kerosene. Table 2 shows the results of analyses of two samples of illuminating kerosene. It can readily be seen how these samples are about equivalent to the quality as prescribed by specifications. It is felt that it would be sufficient if you supply our engine designer with the data presented in Table 2.

I am also enclosing one copy of the operational manual for the AN-PAC-1.

The specifications you gave us were forwarded the other day and I will keep you informed as to the progress achieved.

Sincerely yours,

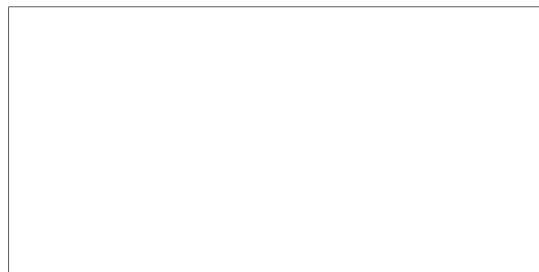

25X1
